

Community Energy & Emissions Planning 101

This course delivers the knowledge and tools to manage energy plans across the community and for municipal operations. Course content includes:

- Essential elements of energy and emissions plans
- Navigating the process – selecting a planning approach, managing consultants, setting up for implementation
- The people side of planning & implementation
- Funding sources and strategies
- Elements of successful implementation

Planning and implementation case studies of community energy and emissions plans and operations energy plans will provide real life examples of successful plan development and implementation. After completing the course, students will feel competent in initiating, preparing and implementing a community and/or corporate energy plan.

Course requirements includes: an interactive webinar (adjusted for time zones), on-line learning, guided independent reading and video review, peer interaction and periodic quizzes/examinations.
