

CCEM 101 Community Energy & Emissions Planning

OVERVIEW This course delivers the knowledge and tools to *create & manage plans to save energy and emissions across the community*. Course content includes:

- Essential elements of energy and emissions plans
- Differences and similarities between energy planning in municipal operations and community-wide
- Navigating the process – selecting a planning approach, managing consultants, setting up for implementation
- The people side of planning & implementation
- Funding sources and strategies
- Elements of successful implementation
- Cross-Canada commonalities and jurisdictional differences

OUTCOMES Planning and implementation case studies of community energy and emissions plans and operational energy plans will provide real life examples of successful plan development and implementation. After completing the course, students will feel competent in initiating, preparing and implementing a community and/or corporate energy plan.

REQUIREMENTS This course includes an interactive webinar (adjusted for time zones), on-line learning, guided independent reading and video review, peer interaction and periodic quizzes/examinations.

INSTRUCTORS Our multi-disciplinary instruction team has over 50 years of combined experience with communities, climate, and energy.

PRE-REQUISITES None. This course is designed to move students rapidly from basics to advanced topics.
