

CCEM 103 Green Energy & Local Economic Development

OVERVIEW This course provides an introduction to the wide range of clean energy strategies and green economy opportunities for communities. The development of clean energy can provide substantial local economic benefits. This course will provide guidance on:

- Keeping taxes and emissions low & attracting investment and infrastructure development
- Creating jobs and keeping energy dollars circulating locally
- Improving local energy resilience and security
- Estimating total community-wide energy spending in your community (it may be bigger than you think)
- Linking improved air quality to health care savings
- Deciding if clean energy should be a non-tax revenue source or indirect taxation
- Developmental pathways

OUTCOMES Case studies will provide examples of operational clean energy projects and illustrate local economic benefits. After completing this course, students will understand how to evaluate the local economic potential of green energy projects and maximize local benefits.

REQUIREMENTS This course includes an interactive webinar (adjusted for time zones), on-line learning, guided independent reading and video review, peer interaction and periodic quizzes/examinations.

INSTRUCTORS Our multi-disciplinary instruction team has over 50 years of combined experience with communities, climate, and energy.

PRE-REQUISITES CCEM 101 (or equivalent level of experience) is recommended.
