

## CCEM 106 Low Carbon Transportation

**OVERVIEW** This course provides an introduction to the broad spectrum of strategies to encourage and support low carbon transportation options, including:

- The passenger transportation pyramid as a framework
- Policies to support walking, cycling and mobility support vehicles
- Supporting electric and other low carbon vehicles
- Corporate fleet management strategies to minimize emissions
- How behaviour change can improve fuel efficiency
- Managing transportation in small communities

**OUTCOMES** Case studies will be used to provide on-the-ground examples of low carbon transportation planning and implementation throughout Canada. After completing this course, students will understand the variety of low carbon transportation alternatives available and how to include them in community plans and corporate fleet programs.

**REQUIREMENTS** This course includes an interactive webinar (adjusted for time zones), on-line learning, guided independent reading and video review, peer interaction and periodic quizzes/examinations.

**INSTRUCTORS** Our multi-disciplinary instruction team has over 50 years of combined experience with communities, climate, and energy.

**PRE-REQUISITES** CCEM 101 (or equivalent level of experience) is recommended.
